## Our Centre

Welcome to Smile Zone Dental Speciality Centre! Here you will receive world class dental care to provide complete support to your smile. The centre is professionally managed with all amenities of a good modern dental centre.

Besides the latest equipment and technology our spacious centre is designed to make your dental treatment a pleasant experience. There is a comfortable waiting room and the treatment and counseling is provided in a separate chamber. Our objective is to ensure that all patients under our care walk out of our centre with a smile on their face!

## Our Mission Statement

- Excellence in whatever we do
- Offering our patients the advantage of latest technology
- Providing state of the art dental care in a caring atmosphere
- Following high standards of professional integrity, honesty and ethical care

## Our Team

A team of extremely competent doctors is available at our centre. The centre is managed by Dr. Priya Verma. We have a team of dedicated specialists to help you with specific dental needs. An oral surgeon is available for minor dental surgeries, an orthodontist for braces for children and adults, a periodontist for complicated gum problems. We also offer cosmetic dental treatments and IMPLANTS to our patients.

All our staff are regularly inoculated against illnesses like hepatitis B.

## Our Treatment Philosophy

We believe in preserving what nature has provided. Our treatment objective is to save your existing teeth. We use minimal invasive techniques and believe in preventive dental care which, in the long run gives you better dental health at a lower cost.

## Counseling And Treatment Planning

You will be examined by the doctor who will give you the various treatment options available for your problem, the time schedule for the treatment and the expected costs involved.

Please do not hesitate to ask as many questions as you wish before finalizing your treatment plan. We will gladly answer all your queries so that you commence your treatment with confidence in our care.

## Keeping Records

We maintain meticulous records, both manual and computerised, of the treatment provided to our patients. This helps us keep track of all treatment provided to you. It also keeps us informed of any existing medical conditions which need to be kept in mind while treating you. This data is used to provide you with preventive dental care. We use this to ascertain patterns of disease and effectiveness of different materials. It also helps us keep a check on our work standards.

## Post Treatment Counselling

After completion of your treatment, we will review your case and guide you on how to best maintain your teeth so that the care provided to you lasts for the longest possible time. We will also collect feedback from you regarding your impression on the care provided to you. This feedback is used to further improve and upgrade our services.

## Disinfection And Sterilization

Infection control has highest priority in our centre. We follow universal standards for disinfection and sterilization. Your doctor and the assistant will don a new set of gloves, in your presence, before starting your sitting. Whenever possible we use disposable instruments. We are proud to say that we autoclave all our instruments. Those instruments that cannot be autoclaved are subjected to "cold sterilization" or "chemical sterilization" so that our patients have no worries on this account.

### **We Care For You In Emergencies**

Despite our schedule we try to provide immediate attention to patients in emergencies.

### **Facilities and Treatment**

Our centre is equipped with the latest equipment. We are equipped with an RVG X-RAY ,which is a digital x-ray.This not only reduces your exposure to x-rays drastically but your x-ray is also immediately viewed on the computer screen to facilitate your treatment. Your x-ray can be e-mailed to you or given to you on a CD. We are constantly upgrading our equipment and implementing latest technology.

### **We practice ethical dentistry**

We have a social side to our practice. We will not highlight this, except to say that we provide the same commitment, care and quality of treatment to all, not withstanding the economic status of the patient.
